### A Bulletin on Corn Insects.

The Mississippi Experiment Station has published a bulletin on insects injurious to corn, which will doubtless inter :est some of the readers. The publication is intended to be used as a reference during the season, and also to awaken some farmers to see the advantage of fall plowing for the destruction of insects. From this bulletin we extract the follow-

Summary of Remedies: The reader will perhaps have noticed that under the head of remedies for nearly all the foregoing insects, fall plowing in one way or another has been mentioned. We wish here to call special attention to this point. In this State and throughout many localities of the South, land washes considerably, and all possible means should be taken to prevent this by hillside ditches and the like. With some land it would not be advisable to plow in the fall, owing to danger of washing, but in the case of sod land, or land which has been allowed to become grown over with grass, it will pay to break up the sod in the fall, as it will leave the soil in better condition for working early in the spring. Fully threefourths of our injurious insects spend a part of their lives upon or within the ground, and autumn is the best time for their destruction. By fall plowing the larvæ and pupæ are exposed upon the surface, where they are picked up by the birds or killed during the winter by sudden changes of the weather. Many larva also will die during the winter from lack of food; and insects which pass the winter in the ground as pupæ, are killed by the breaking up of the compact earth surrounding them. Recent investigations regarding the food of birds, show that these do immense good in destroying larwas and pupa during the winter. Sod land contains many insects, and the case of the Ligyrus beetle, already mentioned, serves as an illustration of the fact that these insects will work upon other plants aside from grass, if the land is not plowed till spring.

"When corn is 'laid by' too early, the land becomes covered with a thick growth of crab grass and weeds, forming a suitable place for many insects to deposit their eggs. On the station farm, it is our practice to sow cow peas between the rows of corn when the latter is 'laid by'. This method is practiced principally on account of the effect of the peas as a fertilizer, but at the same time the method assortment of weeds and grasses.

"Owing to the danger of washing when land is plowed in the fall, a much better farm practice than fall plowing consists in the breaking up of sod and other lands during the summer, and planting cow peas, either broadcast or in rows to be cultivated. This method practically accomplishes the same results as fall plow-ing, so far as regards the insects; and considering the great fertilizing value of the peas, the method cannot be too would have netted about 30c per cwt., and strongly recommended."

### Winter Cultivation of Lettuce, or "Salad" A Profitable Industry.

The farmers of Eastern Carolina have probably better chances for diversified farming than any other country under the sun. This being the case what excuse can they have for sticking to the old ruts and trying to make a living out of a one crop farm.

We publish below a letter from a correspondent of the Wilmington Star, who tells about one industry where the profits are very remunerative.

The correspondent says:

"In the issue of the Star, Jan. 19th, mention was made of the lettuce or salad truckers. Later and more minute inquiry into the matter and upon consultation with Mr. Oliver C. Stevens, who is representing the firm of Sharp Cox & Co. of Philadelphia, who are heavy receivers of this article of export from our country, we learn that this week's total shipment has been rather light, owing to the failure of this article to mature. Had weather been favorable for its maturing no reason or excuse could be assigned for the defect. Total shipment this past week, ending Saturday, January 25, were 131 barrels salad, the average price these goods were sold by those receiving them, \$4.75 per barrel. Less expense nets the grower at least \$3.90, and much of the earlier shipments were sold at over \$6.

While the cultivation of salad is a very expensive mode of trucking, at the figures above mentioned, it is very remunerative to the growers. There are in the neighborhood of Wilmington twenty five acres now set in salad under cloth it taking in the neighborhood of 90,000 yards of cloth to cover the acreage. While expensive, it is quite remuners

ative. Where can the farmers raise so good a crop in the winter months as they have successfully done this winter with salad.

The first shipments of salad were made about December 1st and will continue until March 15th. Messrs. Martindale. Horner, Trask, Springer, Mills, Pearsall, Montford, Jones, Klien, Garrell and Chadwick are the heaviest growers of this article. Quite a number of smaller ones -too numerous to mention. Messrs Carrell and Co. have two acres of this article under cover. A visit to his place vesterday showed to us the beds in their healthy and thriving condition. He will in a few days be cutting daily from twenty to thirty barrels.

There has been so far a thousand barress of salad shipped from here, averaging a net profit of \$4.50 per barrel, making a total of \$4,000 left in and among our worthy farmers, at the very time when money is most needed. This is nothing to what it will be when the season closes: it will be many times larger.

Mr. Stevens informs us that he does not look for any decline in price but rather a better and stronger market than ever at present.

This is the only part of North Carolina where salad is grown to any extent. We predict for our neighboring country in the future to be the salad oasis of the South."

To MAKE a good bard soap dissolve one pound of potash to twelve quarts of water in the kettle in which the soap is to be boiled. Add to the potash five pounds of grease. Boil slowly, adding a little boiling water as it is cooking. Stir with a stick and boil two or three hours. When the mixture adheres and strings from the stick it is boiled enough. Pour into old pans or moulds. The following day cut into bars and dry for use.

Value of Skimmilk for Hogs.

I fed a lot of pigs on skimmilk warm from the separator morning and night, which George Peabody was one of the has many advantages from an entomological point of view, as the peas attract less insects than would a miscellaneous and cool at noon with corn meal, bran and guests, some one inquired: "Which did you enjoy most, Mr. Peabody, making you enjoy most, Mr. Peabody, making your money or giving it away?" "Well,"

Woodware and Ouesnwere in the South pounds and dressed 212 pounds, thus Hopkins was observed to be deeply inshrinking only 19 per cent. With corn | terested in the answer, "I enjoy making meal at \$15.70 per ton, corn at 40c per money. I think it is a great pleasure was \$4, which deducted from the \$12.95 away, it did not please me at all. In fact any one else and as low as the lowest. received for each hog at 5c live weight, it distressed me. But I thought the mat at 3c about 22c per cwt. Out of this must went around among the poor people liv. \$1,000.00 come the first cost of the pigs (in this case | ing in the rooms, so clean and comfortable \$2 each), care, insurance, taxes, losses, etc; and had quite a new feeling. I enjoyed

feasibility of using homing pigeons for vessels in distress at long distances from land will be made on a large scale next June. The British admiralty has sent one hundred English pigeons to the West Indies, where they will be taken on board the crusier Blake, now about to return home, and let loose, with exact indications of the time and place, at intervals on the passage. At the same time The Paris Pett Journal, which has taken up the matter since the accident to La Gascogne last winter, will send out a industry of our neighboring farmers and number of French pigeons on a steamer sailing from St Nazaire, to be set free at different times as the vessel draws away from land.

A new magazine is being published by a man named Blood. Its cire culation should be good.

> LOSS OF VOICE After Acute Bronchitis CURED BY USING

ER'S Cherry

A PREACHER'S EXPERIENCE.

"Three months ago, I took a violent cold which resulted in an attack of acute bronchitis. I put myself under medical treatment, and at the end of two months was no better. I found it very difficult to preach, and concluded to try Ayer's Cherry

Pectoral. The first bottle gave me great relief; the second, which I am now taking, has relieved me almost entirely of all unpleasant symptoms. and I feel sure that one or two bottles more will effect a permanent cure. To all ministers suffering from throat troubles, I recommend Ayer's Cherry Pectoral."-E. M. BRAWLEY. D. D., Dist, Secretary, Am. Bapt. Publication Society, Petersburg, Va.

Flat Culture for Sweet Potatoes. BY D. LANE.

My plan of making sweet potatoes is to throw two light furrows together, after the land has been broken and made fine, For a thorough and practical Business Educaand on this small ridge set the sprout or vine. After a few days I split out the middle with a cultivator one time to a try before paying the Tuition. Before making row, and about ten days from setting, I side the plants with the cultivator, stirring the ground almost as completely as if siding corn, very little hoe work being needed; one good hand will do all the hoe work needed for one acre of potatoes in

one day. If land is not packed by hard rains, my second plowing is done with Stonewall or other long sweep, siding plants again, just as they are beginning to run; if ground is packed hard, I run cultivator again. The third and last plowing is usually done with a small wing turning plow, throwing dirt lightly to the plants, seven or eight furrows being sufficient to do all the cultivation necessary after plants are set.
